

Your information as never seen before

From global view to detail, 2 or 3 clicks away

- Radial Viewer supports traditional business intelligence reports and dashboards, as well as customized graphs and functions not available in any other tool, allowing you to discover relationships and make decisions that were impossible before.
- All of the information from your business is at your fingertips: easier, faster and better than ever.
- Solar graphs, bubbles, growth, or bars can be moved, resized, expanded, combined, and much more.
- Visualizing behavior, trends, and relationships are so intuitive that you can touch them.

It takes 5 to 10 minutes for a non-technical end-user to create a report like these...

Radial Viewer Architecture

The new generation of Business Intelligence

The explosion of new technological tendencies has introduced many new possibilities; instead of trying to adapt old business intelligence models to new technologies, Radial Viewer defines new elements in a more agile manner and that is interconnected, displaying more information in less space, and in a clean, organized way. Thus you will now be able to access more and better information from your ERP, CRM, POS, Inventory, and other systems... Faster and with complete independence.

Cube Maker is a module that provides a simple drag-and-drop interface to handle tables and Entity-Relationship models, star schemas and multidimensional cubes; it takes around 30 minutes to build a cube.

Radial Viewer supports leading market database engines.
